Awareness of Legionella Bacteria in Water Systems

Overview

UCL is legally obliged to control legionella within its water systems and has written arrangements to do this which are stated in the UCL Legionella Management & Control Standard.

The Awareness of Legionella bacteria in Water Systems eLearning course aims to raise awareness of the risks from legionella in water systems that are managed by the departments themselves. It provides information on the risks and risk factors associated with the presence of legionella in water systems, responsibilities and the required controls for prevention and management of legionella bacteria.

The course covers:

- Legionella bacteria; the environments it thrives in and the dangers it poses
- The controls UCL has put in place to comply with the legislation; the role holders within UCL Estates who oversee the management of legionella
- The Head of Department’s responsibilities for managing the use of equipment connected to water systems, including appointing their own responsible person to help them manage the use of such water systems.

For Heads of Department and anyone with a UCL User ID.

Accessing the training

You will need your UCL user ID and password to log UCL Moodle. This is the same username and password you use to access your UCL email.

When logged into your ‘My home’ page in Moodle, enter ‘legionella’ in the search box and enrol on the course by clicking on Enrol Me under Self Enrolment (no enrolment key required).
