This is a configuration guide for connecting to a Google Android device version 6.0.1 (Marshmallow) to the UCL eduroam wireless network. Android devices vary and the process may look slightly different on your device.

Note: If you are not from UCL you will need to contact your home institution for assistance, more details can be found at the following address: www.ucl.ac.uk/isd/wireless

1. From the home screen go to the Apps menu:

2. Find and tap on Settings to start it (you may have to swipe several screens to the right to find it):

3. In the Wireless & networks section (below, left) select Wi-Fi.

4. The Wi-Fi screen will open (below, right) and display a list of available networks – select eduroam.

5. You will be prompted to sign in to the wireless network.
   - Identity: enter your UCL user ID and add @ucl.ac.uk after your user ID. E.g. ccaaxxx@ucl.ac.uk.
   - Anonymous identity: enter anonymous@ucl.ac.uk.
   - Password: enter your UCL password.
   Tap Connect when complete – note that you may need to scroll down in the box to see the latter options:

6. You should now be connected to the eduroam network and this confirmed by the WiFi configuration menu. If you are having trouble connecting there are known issues with some versions of Android. See help at: www.ucl.ac.uk/isd/wireless

7. Press the Home key underneath the screen to exit Settings and return the main screen.
