Connection Guide for Apple iPhone or iPad

1 Getting Started
The Janet Roaming Service (JRS) at University College London is advertised via the eduroam wireless network and secured using IEEE 802.1x/EAP – PEAP authentication.

<table>

<tr>
<td>Authentication Method</td>
<td>IEEE 802.1x</td>
</tr>
<tr>
<td>Authentication Protocol</td>
<td>EAP-PEAP (Protected Extensible Authentication Protocol) with MSCHAPv2 authentication.</td>
</tr>
</tbody>
</table>

2 Requirements
The following is required to connect to the eduroam service at UCL.

- A UCL userid and password.
- An Apple iPhone, iPod touch or iPad with iOS 2.0 (or higher). These instructions refer to iOS 10 but older versions will have similar instructions.

3 Connect to eduroam
Open the Wi-Fi Networks window (from the Home screen select Settings ► Wi-Fi).

Select eduroam *

* If the eduroam Wi-Fi is already configured, select the i next to eduroam and Forget This Network.
When prompted for credentials input your UCL userid and password. Your UCL userid **must** be appended with @ucl.ac.uk.

e.g. zcxxano@ucl.ac.uk

Select **Join**.

You will be prompted to accept the QuoVadis Global SSL ICA G2 Certificate. Select **Trust** only if this is true. You may need to select **More Details** > to view the entire name.

You will now be connected to the eduroam service, from where you can access UCL Network Resources (e.g. Email) and the Internet.

You will not be prompted for your UCL userid and password again unless you change your password (or as informed by UCL ISD Service Desk).
