

GREEN MANIAC

www.greenmaniac.com

Green Maniac is a 'Green' social networking project that links together a number of employment networks in London with a 'cross cutting' environmental network. This will widen the participation in the 'Green' economy and hence increase the overall opportunities for employment.

This project aims to:

- Raise the profile of environmental issues and promote greater involvement in environmental activities.
- Widen access to employment opportunities through involvement in the 'Green' economy.
- Take advantage of a potential demand for new skills (for example: retrofitting solar panels, energy conservation advice, insulation fitting, recycling and so on).
- Ensure that the networks are self-sustaining and capable of rolling out to a wider client base.

The Partnership: UCL/Meganexus, Volterra Consulting, Centre for Advanced Spatial Analysis (UCL), Goldsmiths College, Department of Computer Science (UCL), Sutton Council, British Library Business and IP Centre, Action Acton, Urban Futures, East London Business Alliance.
