

## Consent Form

Procedure: Fibreoptic Endoscopy +/- Intubation under Local Anaesthesia

As a voluntary participant on this course, this will involve undergoing fibreoptic nasotracheal & orotracheal endoscopy, and possibly naso/orotracheal intubation under local anaesthetic.

During the procedure there may be some discomfort and nasal/airway irritation. The procedure may cause coughing and gagging, a dry mouth and nasal stuffiness, which may last for several hours afterwards. Candidates will have fasted for at least 4 hours prior to the procedure and are advised not to drive for 4 hours and to fast for approximately 2 hours post-procedure.

Risks to be aware of include:

- Trauma to the airway including bleeding or perforation
- Allergic reactions to lidocaine or local anaesthetic preparations
- Hypertensive response to co-phenylcaine
- Drug toxicity to lidocaine
- Aspiration of gastric contents
- Infection – localised or systemic

### Consent

I wish to take part in this endoscopy airway training course. In doing so, I am willing to act as a subject for endoscopy +/- intubation under local anaesthesia. I have fasted as per recommendations. I am also aware of the side effects of the procedure and the possible risks/complications of the procedure, as listed above.
