Anxiety Disorders Appropriate for MATCH-ADTC

- Separation anxiety disorder
- Generalized anxiety disorder
- Social anxiety disorder
- Specific Phobia
- Panic Disorder with/without Agoraphobia
- Other disorders not listed as Anxiety in DSM-V
 - Obsessive Compulsive Disorder (requires slight modifications)
 - Post-Traumatic Stress Disorder

Basic Anxiety Treatment Model

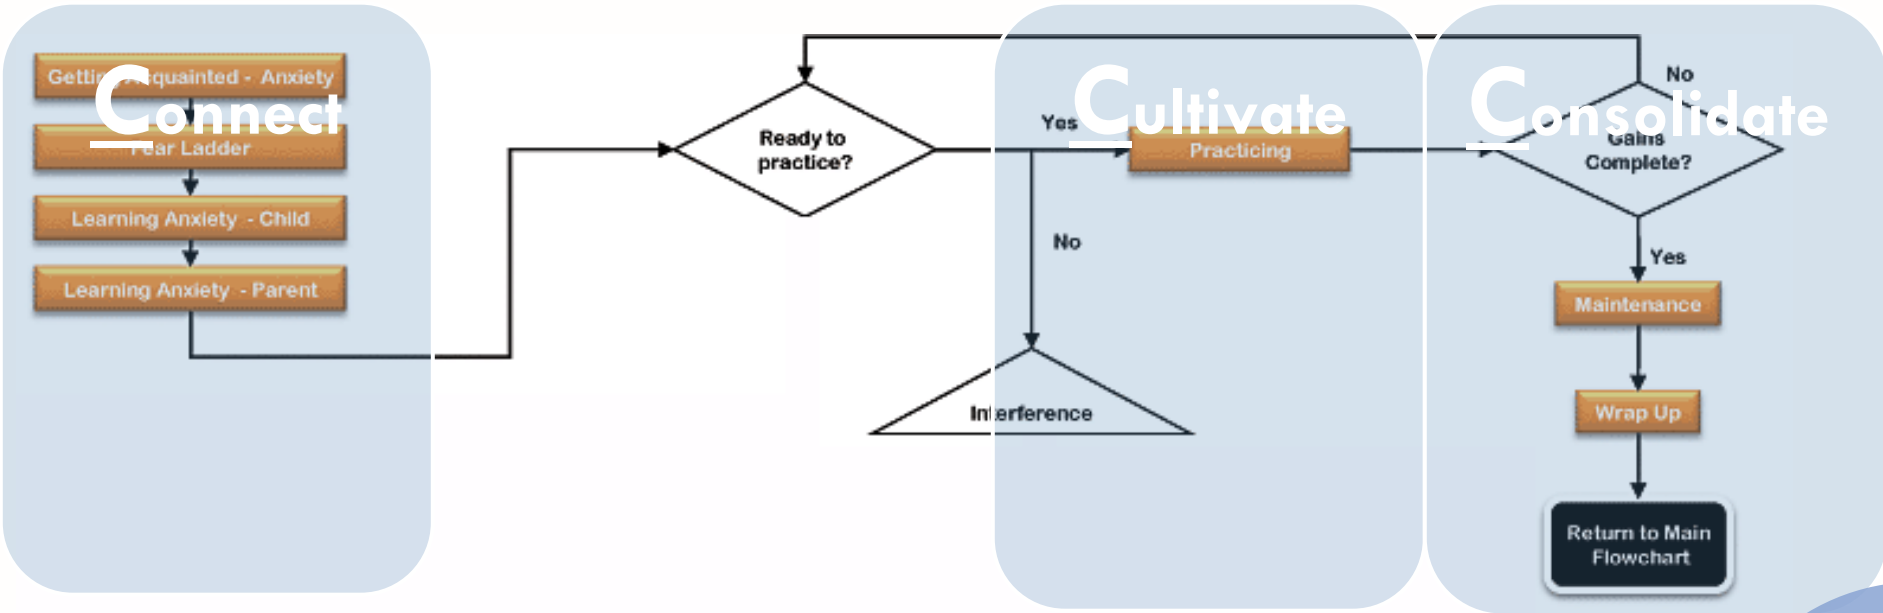

MATCH-ADTC Modules for Anxiety Disorders

- Getting Acquainted
- Fear Ladder
- Learning About Anxiety - Child
- Learning About Anxiety - Parent
- Practicing (Exposure)
- Maintenance
- Wrap-up
- Other common modules:
 - Cognitive STOP
 - Rewards
 - Learning to Relax

Anxiety Flowchart

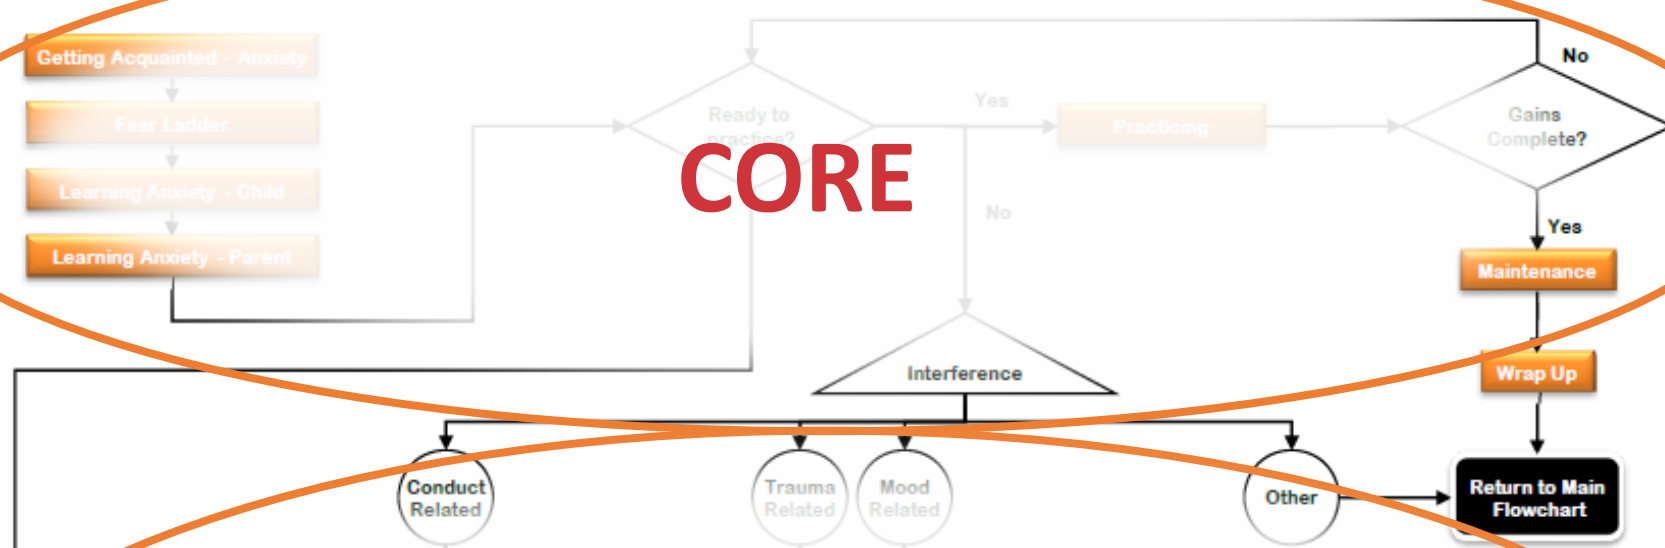

Anxiety

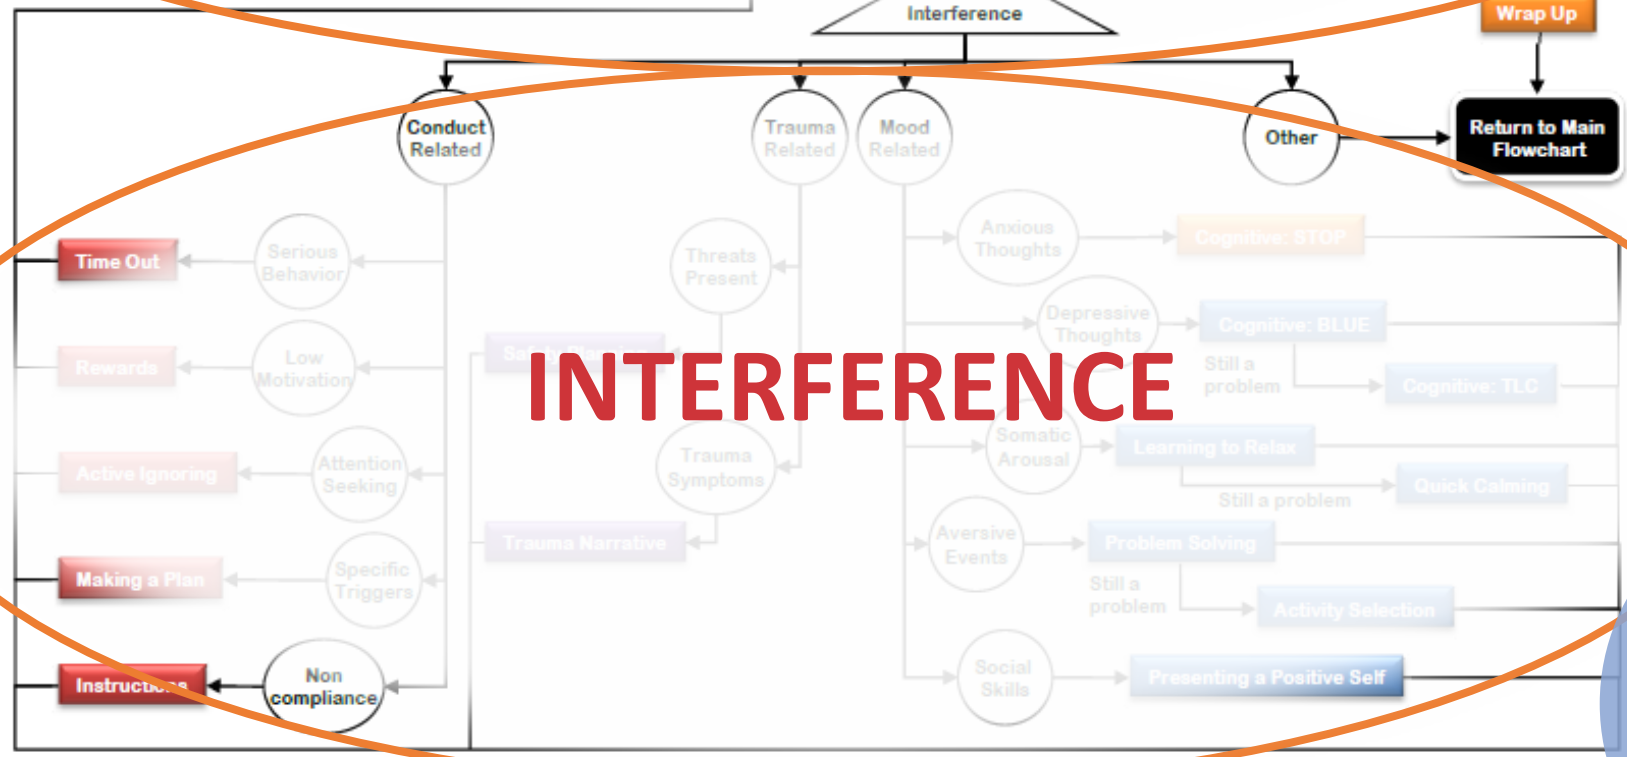

© 2009 PracticeWise, LLC

- Getting Acquainted - Anxiety
- Fear Ladder
- Learning Anxiety - Child
- Learning Anxiety - Parent

CORE

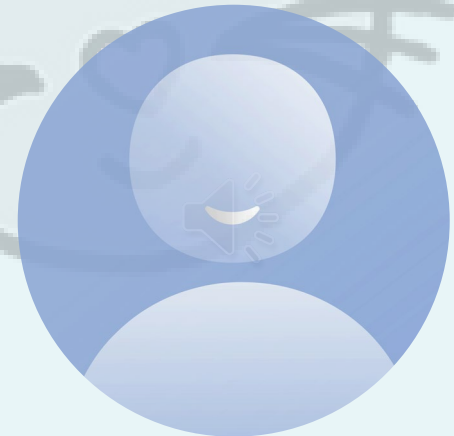

INTERFERENCE

Module 1: Getting Acquainted

Getting Acquainted

- “Building a Relationship” exercises
- Orientation to Program
 - “Coach” metaphor
 - Practice!
 - Introduction to Fear Thermometer
- Games at the end of the session

Getting Acquainted: Building a Relationship

- Establish with child that therapy involves information-sharing
- Personal Facts Game
 - Rule: Any question I ask, I also have to answer
 - Remember what child shares for later
 - Ideas for questions?

Getting Acquainted: Orientation to Program

- Therapist as a “coach”
- Importance of active child participation
- Goals of program:
 - Knowing When You’re Anxious
 - Knowing What to Do About It
- Homework assignments and rewards
 - Homework at each session
 - Earn rewards for bringing and completing homework
- Introduce “Fear Thermometer” to child

Introduce Fear Thermometer

Getting Acquainted: Things to Remember

- Orientation to Program
 - “Coach” metaphor
- Anxious children are often:
 - ANXIOUS
 - Avoidant
 - Fearful or Wary
 - Not used to talking about their thinking
- General rule: Leave ‘em Laughing!
 - We want them to come back!
 - Therapy can be fun, exciting, and empowering

Fear Ladder

Fear Ladder: The Basics

- Identifying and ordering feared stimuli makes planning exposure easier and allows client to see progress
- Use the “Fear Ladder” worksheet
 - Will also need Fear Thermometer and index cards

Building a Fear Ladder-1

- Create a list of 10 or more feared situations in the primary domain of concern
 - Write each scenario on a separate index card
- Vary the situations across relevant dimensions, such as:
 - Number, gender, age, or familiarity of people present
 - Location
 - Intensity
 - Proximity

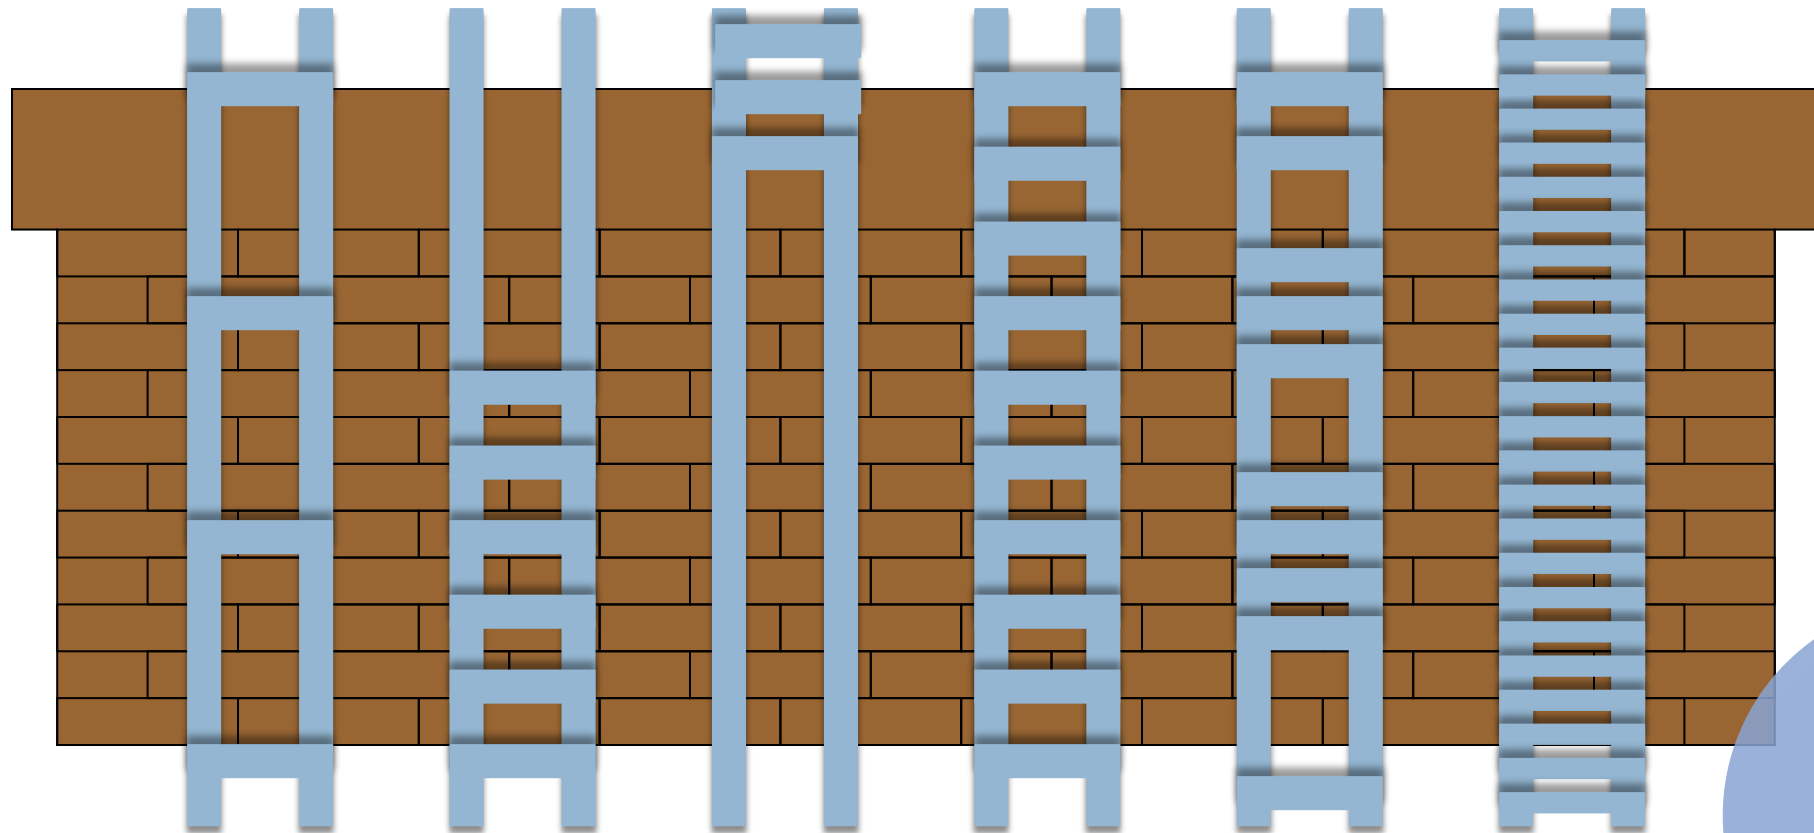

Building a Fear Ladder-2

- Ask child to give each situation a fear rating using the Fear Thermometer
 - Order cards from the least (0) to the most feared (10)
 - Aim to have items in the low, middle, and high ranges
 - Revisit steps to generate new items if missing scale points
- Repeat process with parent(s)
 - Do not share child's rating before getting parent's
- Once both parties have identified and rated scenarios, select 10 to 12 items for final ladder
 - Focus on items that can actually be practiced

Which Ladder Would You Climb?

A B C D E F

Social Anxiety Variations

Possible branches might include:

- Age or gender of person you are engaging (adults vs. youths, girls vs. boys)
- Size of group (big vs. small)
- Social setting (school vs. recreation vs. community vs. unfamiliar place)
- Type of interaction (greetings, requests, conversations, placing orders/making purchases)

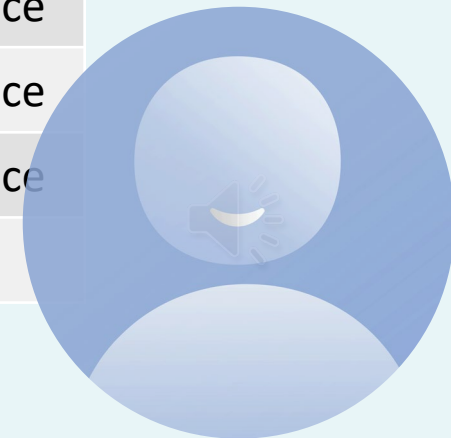

Social Anxiety Example

| Rating | Item |
|--------|---|
| 10 | Organizing game among group of peers on playground |
| 9 | Asking unfamiliar peer to play game |
| 8 | Asking familiar peer to play game |
| 7 | Ordering food from unfamiliar teenager at familiar restaurant |
| 6 | Ordering food from familiar teenager at familiar restaurant |
| 5 | Approaching unfamiliar adult and asking 3 questions |
| 4 | Approaching familiar adult and asking 3 questions |
| 3 | Approaching unfamiliar peer and asking 3 questions |
| 2 | Approaching familiar peer and asking 3 questions |
| 1 | Waving with eye contact at unfamiliar peer |

Separation Anxiety Example

| Rating | Item |
|--------|---|
| 10 | Parents late 15 min for school pick-up |
| 9 | Parents late 10 min for school pick-up |
| 8 | Child waits in one aisle of a store while parent/therapist is in a separate aisle |
| 7 | Child waits inside home while parent take outs trash |
| 6 | Child stays in a separate room from parent at home for 5 min |
| 5 | Scavenger hunt in the clinic |
| 4 | Sits in therapy room alone for 5 min with therapist outside of office |
| 3 | Sits in therapy room alone for 3 min with therapist outside of office |
| 2 | Sits in therapy room alone for 1 min with therapist outside of office |
| 1 | Imagines being alone in therapy room |

Special Cases

- Trauma
 - Fear ladder used to help guide the creation of the trauma narrative
- Panic disorder
 - Fear ladder includes interoceptive exposure
- OCD
 - Fear ladder includes focus on ratings without the compulsions
- GAD
 - Exposure to worry itself
 - Helping child to gain control over worry cycle

Special Cases: OCD and Panic Disorder

How to Adapt MATCH

How to Adapt MATCH to OCD

- Same basic format as any other anxiety
 - In addition to learning about fears, will need to gather information about behaviors that are used to neutralize anxiety
 - E.g., compulsively washing hands after touching any foreign object
 - Practices on fear ladder will involve exposure plus inhibiting the neutralizing rituals

How to Adapt MATCH to Panic Disorder

- With panic, the feared stimuli are the child's own harmless bodily sensations
 - May be difficult for the child to separate each of those sensations in order to create a fear ladder
- Use an interoceptive assessment to isolate each of the bodily feelings and rate them on the fear thermometer
- Now you have a fear ladder and can practice

Interoceptive Assessment (*“Learning Your Anxious Feelings”*)

| | How Strong? | How Anxious? | How Similar? |
|---|-------------|--------------|--------------|
| Move your head side to side (30 seconds) | | | |
| Hold your head low b/w your legs (30 seconds), then lift quickly | | | |
| Run in place (1 minute) | | | |
| Hold your breath (45 seconds) | | | |
| Tense all your muscles or hold push-up position (1 minute) | | | |
| Spin in a swivel chair (1 minute) | | | |
| Hyperventilate (1 minute) | | | |
| Breathe slowly through a small straw or as slowly as possible (2 minutes) | | | |

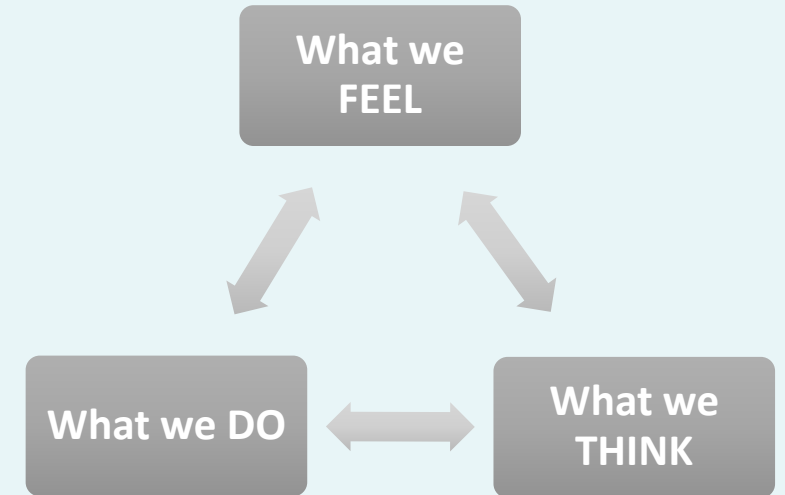

Module 3: Learning About Anxiety (Child)

Learning About Anxiety (Child)

- There are 3 parts to anxiety:
 - What we FEEL!
 - What we THINK!
 - What we DO!
- Anxiety is normal and can be helpful!
 - A built-in alarm
 - Helps motivate us to do something
 - Sometimes, there is real danger!
- “Anxious Thoughts and Feelings” worksheet
- “Learning About Anxiety” worksheets

Distinguishing Between Anticipatory and Acute Alarms

- Yellow light
 - Something bad might happen
 - Worry; obsessional thoughts
- Red light
 - Something bad is happening RIGHT NOW!!!
 - Panic symptoms, PTSD re-experiencing, mind going “blank,” etc.

YELLOW LIGHT

"Something bad **MIGHT** happen."

RED LIGHT

"Something bad is happening
RIGHT NOW!"

False Alarm Detection

- How to identify a “false” alarm?
 - False alarms → scary, but not dangerous
 - False alarms can get in our way
- Sometimes, our alarms are too sensitive and go off when there is no real danger
 - Can modify slightly for Panic, OCD, PTSD
- In session, we will work to help you learn the difference
 - By looking for clues
 - Testing out situations
 - Practicing, small steps
 - “We can go slow, but we will always be moving forward.”

Module 4: Learning About Anxiety (Parent)

Learning About Anxiety (Parent)

- Nature of anxiety in children
- What works/what doesn't
 - Talking doesn't help much
 - Practicing to face anxiety provoking situations and handling them helps
- Coach roles
 - Therapist → “session coach”
 - Caregiver → “home coach”
- Alarms and False Alarms
- Principles of Success
- “Parent Interview” (if necessary)
- “Understanding Anxiety” (parent handout)
- “Helping Your Child Succeed” (parent handout)

Module 5: Practicing

Basic Behavioral Exposure Practicing

- What works/what doesn't
 - Talking doesn't help much
- Introduction
 - Introduce child to feared stimuli in a graded fashion
- Move slowly
 - From less → more threatening stimuli, following habituation
- Repetition
 - Repeat the same exposure until child is desensitized
- Allows for threat reappraisal

Top 10 Reasons Therapists Don't Do Exposure

- It's going to hurt the child
- You can't do exposure on my client's kind of worries/fears
- It's uncomfortable
- It's too hard and complicated
- It didn't work before
- We don't have the right tools/settings
- Time consuming
- The child doesn't want to do this
- I can't make the child do what I say
- It seems too simple

What Happens with Repeated Confrontation of the Feared Stimuli?

- Anxiety initially increases
- Anxiety naturally decreases over time
- Individual learns that the situation/memory is not dangerous
- Individual learns that the distressing feelings (emotional and physiological) decrease
- Individual learns that they can handle the fear/anxiety and feel more in control
- If the individual repeatedly confronts anxiety-producing situations, the distress gradually decreases and they can become relatively comfortable in that situation.

Fear Activation

Avoidance

Rationale for Exposure

Rationale for Exposure

Practicing: Guidelines

- Set the occasion for success
- Adequate preparation with child
- Situation must be anxiety provoking
- Take ratings
- Pay attention to behavior cues
- Habituation
- Debrief

Practicing: What it Looks Like in Session

- Start low and go slow!
- Therapist exudes confidence in child
 - Reminds child of previous successes
- Talk about it
- Do it
- Talk about it
- Do it some more!

Two Practice Types

- “Before-and-After Practice Record”: discrete trials of behaviors (e.g., asking someone a question)
 - Rate fear before and after each trial
- “Start-and-Stop Practice Record”: Extended or continuous behaviors (e.g., standing in a dark room, touching a feared object, giving a speech)
 - Rate fear when you start, and then at one minute intervals during the exercise

About Habituation

- Two varieties:
 - Within practice habituation
 - Anxiety ratings drop down during each exposure (or set of trials)
 - Between practice habituation
 - Anxiety ratings at the start are lower across trials (i.e., across time)
- Both are your goal!

Practicing: Common Pitfalls

- Ending too soon
 - Letting kid bargain or cry to get out
 - Therapist gets scared/uncomfortable
- Going too fast
- Talking to kid
- Allowing distraction
- Too intense
- Inappropriate target

Practicing: Stepping Back Without Backing Down

- What to do if exposure begins, child is very upset, and you decide exposure was too intense
 - Comment on observed difficulty to child
 - Two choices:
 - Take a break and resume and use coping skills
 - Choose a less difficult but related exposure
 - But do something!
 - Re-engage in revised exposure
 - Praise effort

Module 6: Maintenance

Maintenance

- Accessing the guides
 - Interactive version
- Introduce Maintenance
 - “Maintaining Success” parent handout
 - “What’s New?” child worksheet
- Review importance of continued practice
- Quiz child on new application of skills
- Predict challenges for child
 - Difference between anxiety set-back and anxiety relapse
 - How to apply what the child has already learned
- Review progress (“What’s New?” worksheet)
- Start planning last sessions (Wrap-Up) and final session

Final Exercises

- Child and parent as therapist
- Present a problem that is likely to come up
- Ask them to design Fear Ladder and Practice

Difference Between Set-Back and Relapse

- This is not an “Anxiety Removal Program”
- Remember that anxiety is normal
 - Anxious kids are more likely to develop anxiety when under stress
 - Biological predispositions should be considered
- Consider times when anxiety is appropriate and likely for child
 - During transitions, life-stressors, etc.
- Managing anxiety is the goal
 - For lapses, use skills learned in treatment, monitor anxiety
 - If no improvement, may be a relapse, contact therapist

Module 7: Wrap-Up

Wrap-Up

- Discuss child's feelings about termination
- Review main points of treatment and how they apply to child's life
- Emphasize continuing to practice skills
- Predict challenges and plan solutions
- The Commercial!
- The Celebration!

Next Up!

- Depression Focus
