2 Using a ruler and a sharp blue pencil draw lines from points 0 - 9 to VP2

3 Estimate a 6 metre distance from the standing person and draw a vertical line using a set square.

4 Draw a thin diagonal line from (vertical) Point 6 to (horizontal) Point 6. Make dots at all points where the diagonal intersect lines 0-6. Using a set square draw vertical lines through all intersection dots to make a grid.

5 Superimpose these three shapes on to your grid. Tip; Draw first with a thin blue pencil which allows you to correct any mistakes you might make, then draw neatly with a 0.6 pen.
