CARRYING OUT RAPID QUALITATIVE RESEARCH DURING A PANDEMIC:

# EMERGING LESSONS FROM COVID - 19

### RAPID RESEARCH

Carrying out rapid qualitative research during a pandemic is difficult, but, if carried out well, it can help generate valuable data to inform epidemic response efforts.

### ETHICAL REVIEW

Some fast-track processes for ethical review have been established but these processes continue to delay the set-up of rapid studies.

## 6

#### COORDINATION

The establishment of small groups of researchers with "leads" to guide the process and take ownership of the project helps with the coordination of large teams.

### **STANDARDS**

More work needs to be done to establish standards of "good practice" to guide the implementation of rapid qualitative research.
