## IAS READING GROUP

# ENVISIONING PLANETARY FUTURES: FROM THE APOLLO MISSION TO SPACEX

January 26, 2017 - 4:00-5:00pm

Institute of Advanced Studies  
University College London  
Common Ground  
First Floor, South Wing  
Wilkins Building

What is the future of the Planet? How is it envisioned and constructed? Does it lie in outer-space, on other planets, or does and should it remain intrinsically tied to Earth?

The Planetary is a central yet under-theorised aspect of a wide array of research. This informal reading group will meet fortnightly to discuss critical literature and future research directions on Planetary Futures.

All are welcome.

First introductory meeting:  
**Thursday 26 January, 4pm.**
