

SCRATCH COLOUR SCHEME – PEN SHADES

- Each colour that you set using `set pen color to`  or `set pen color to`  `change pen color by`  may have 100 different pen shades. If the pen shade is 0, then the colour will be very dark. If the pen shade is 100, the colour will be close to white. The default pen shade setting (that is, when you do not set it at all) is 50, a shade in the middle between very dark and very light.
