UPMAP 2008 Physics Year 10

Please note the time that you started to read this questionnaire:

Dear Student,

Please read this section before you begin

In this questionnaire, we want to find out more about the reasons some students continue to study physics after the age of 16 and others do not. We are asking you for some personal details, such as your name because we are interested in how students' answers may change over time and we hope that you will help us again by answering similar questions in about two years' time. There are questions in here about your views on school, family and physics. There are also some physics-based tasks, but we would like to emphasise these have nothing to do with your school marks. We simply would like to compare your answers to these task items with your attitudes to physics.

We hope you will answer all the questions but if you feel uncomfortable with a particular question feel free to skip it.

All answers are confidential.

Your teachers and your school will not see your answers.

Thank you for helping us!

14. PHYSICS TASKS

These tasks have nothing to do with your school marks and your answers will **not** be seen by your teachers or anyone else at your school. We simply would like to compare your answers to these task items with your attitudes to physics.

E1. ELECTRICITY 1

In this circuit below, the reading on ammeter A_1 is 0.4 amps.

What reading you would expect to see

(a) .. on ammeter A_2 ?

(b) .. on ammeter A_3 ?

(c) .. on ammeter A_4 ?

(d) Put a cross in ONE box below to explain your reason for choosing these answers.

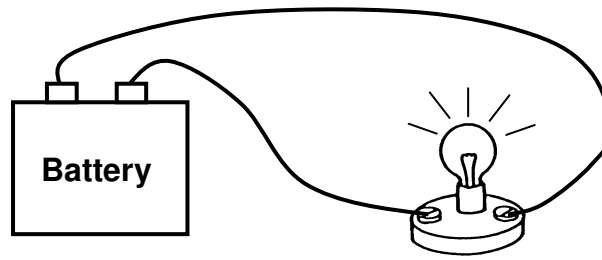

- The current is the same all round the circuit.
- Each bulb uses up **some** of the current, leaving less for the next one.
- The first bulb uses up **all** of the current.
- The current is large close to the battery, and smaller further away.
- The reading is biggest where the currents from the two ends of the battery meet.

(e) How confident are you that your answers to question E1 are correct?

Very confident Fairly confident Not confident Just guessing

E2. ELECTRICITY 2

A bulb is connected to a battery.

The bulb is lit.

(a) Which of the following best describes the **electric current** in this circuit?
Put a cross in **ONE** box only.

- There is an electric current through one wire to the bulb. It is **all** used up in the bulb. So there is **no current** in the other wire.

- There is an electric current through one wire to the bulb. **Some** of it is used up in the bulb. So there is a **smaller current** in the other wire.

- There is an electric current through one wire to the bulb. It passes through the bulb and back to the battery. The current in the other wire is **the same size**.

- There are **two** electric currents from the battery to the bulb. They **meet** at the bulb and this is what makes it light.

(b) How confident are you that your answer to **part (a)** is correct?

Very confident Fairly confident Not confident Just guessing

E3. How much do you agree with the following statements?

F1. FORCES 1

- highest point

Kim throws a tennis ball straight up into the air. It goes up and comes back down into her hand.

Think about the moment when the ball is at A, **on the way up** to its highest point.

(a) How would you describe the motion of the ball at this instant?

Put a cross in ONE box only

- It is getting faster.
- It is moving at a steady speed.
- It is slowing down.

(b) Which of the following diagrams best shows the **vertical** forces on the ball when it is **at point A on the way up**?

(The length of the arrow indicates the size of each force.)

Put a cross in ONE box only

(c) Which of the following best describes the forces acting on the ball when it is **at point A on the way up?**

Put a cross in ONE box only

- The only force acting on the ball is the upward force of the throw.
- The only force acting on the ball is the downward force of gravity.
- The forces acting on the ball are the force of gravity, and the air resistance.
- The forces acting on the ball are the force of gravity, the air resistance, and the force of the throw.
- There are no forces acting on the ball.

(d) Which of the following diagrams best shows the **total force** acting on the ball when it is **at point A on the way up?**

- highest point
