

Accountability of educational networks: What? Why? How?

M.Ehren@ucl.ac.uk

www.ioe.ac.uk/lcll

Coordination of education systems:

- Hierarchical control
- Market governance
- *Network governance*

Network governance involves policies that link different stakeholder organizations (e.g. through incentives such as subsidies) around a public policy purpose and a set of joint goals (Mayne et al, 2003).

What is an (inter-organizational) network?

- Formal arrangements of a multitude of public and private organizations, agencies, and departments that have been constituted to facilitate collective action
- Collective action: implementation of specific education reforms or services, joint professional development, school improvement and exchange of good practices and/or peer reviews.
- (Aspects of) the provision and/or improvement of teaching and learning becomes the joint responsibility of the network, instead of that of single schools.

Types of networks

- Formal/mandated versus informal/self-initiated
- Centralized versus decentralized decision-making/
brokered versus non-brokered governance (lead
organization, network administrative organization,
participant-governed)
- Etc.

(Provan and Kenis, 2008)

Multi-Academy-Trust Model

(Example)

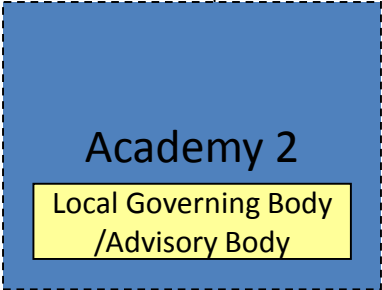

There is only one legal entity accountable for all schools within the chain, the Multi-Academy Trust (MAT). The MAT has one set of Articles which governs all the academies in that chain.

The MAT has a master funding agreement with the Secretary of State

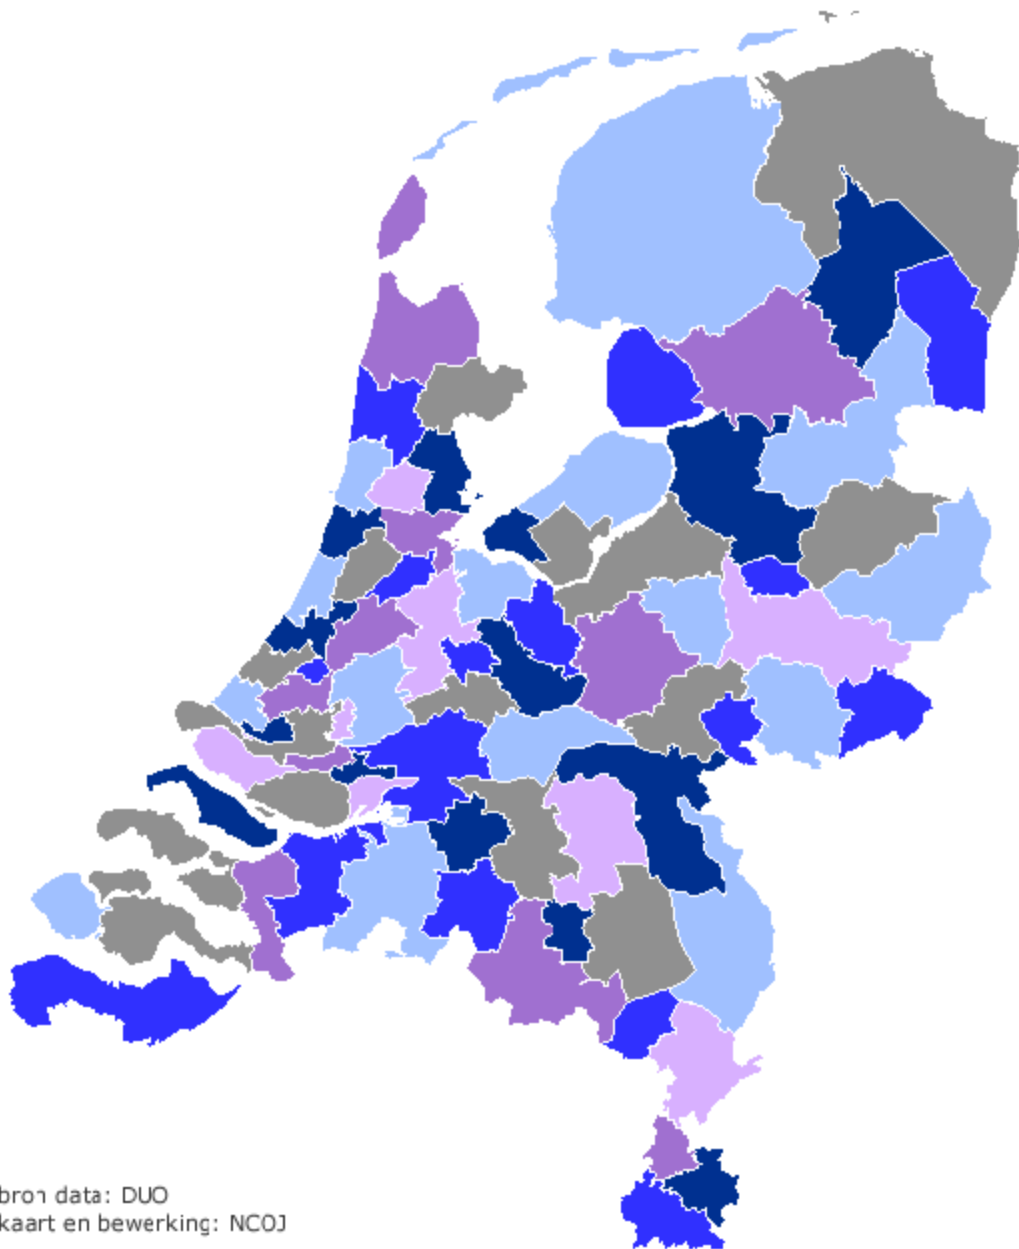

The MAT may set up either a local governing body or advisory body for each academy. The MAT can agree to delegate some matters to this local governing body.

The MAT has a master funding agreement with the Secretary of State

AET (Academies Enterprise Trust):

Bulgaria: peer review network to improve parental involvement

A photograph of a woman with long brown hair, wearing a black top, sitting at a wooden table in a library. She is looking down at an open book on the table. The background is filled with tall bookshelves packed with books of various colors. A red semi-transparent rectangular box is overlaid on the left side of the image, containing white text. The text reads 'Part 2. Accountability of educational networks'.

Part 2.
Accountability of
educational
networks

PLAY THERAPY

Accountability of networks is important because collaboration is not without problems or unintended consequences:

- Fragmentation of delivery structures
- Self-protective behavior
- Inter-organisational politics and struggles
- Network members protect their specific independence and identity
- Loosing sight of the public objectives
- Network members defaulting on obligations to other network partners
- Groupthink
- Inefficiencies (turnover and meeting costs)

(Mayne and Rieper, 2003)

Accountability of school networks needs to improve network-level outcomes and prevent unintended consequences of networking.

What is the added value of the network, and does it contribute to the common good?

Purpose and outcomes of the network:

Performance of networks is not a simple aggregate of performance of its members

Effective networks:

'attain positive network level outcomes that could not normally be achieved by individual organizational participants acting independently' (Provan and Kenis, 2008, p.230)

- Network-level outcomes are specific to context and the purpose for which the network was established, purposes and outcomes may change over time

Three types of outcomes

1. Creating synergy: adding value by combining mutually reinforcing interests
2. Leading to transformation: transform different views into an ideological consensus
3. Enhancing financial efficiency: maximizing the use of resources across the partners in the network

Source: Gray et al (2003)

What does accountability of an educational network look like?

Approach

Methodology:

Bottom-up, 'subjectivist' approach, aimed at validating, interpreting, understanding quality of context-specific approaches and solutions.

Valuing

Goal-free, flexible and specific to context and information needs of (network of) schools and stakeholders

Use/User involvement:

'Collaborative/participatory evaluation'
Stakeholders and schools involved in all phases
Intelligent intervention strategies targeted at all schools/ stakeholders in a network to improve performance of entire network.

Accountability of networks

Level of analysis

Individual: (contribution of) network on individual and individual in relation to network

Organisation: (contribution of) network on member and member to network outcomes

Network: assessment of network-level outcomes and network properties (structure, relationships, internal evaluation mechanisms) contributing to outcomes

Community: (contribution of) network to community it was established to serve and community to network

Examples from our EU-study:

www.schoolinspections.eu

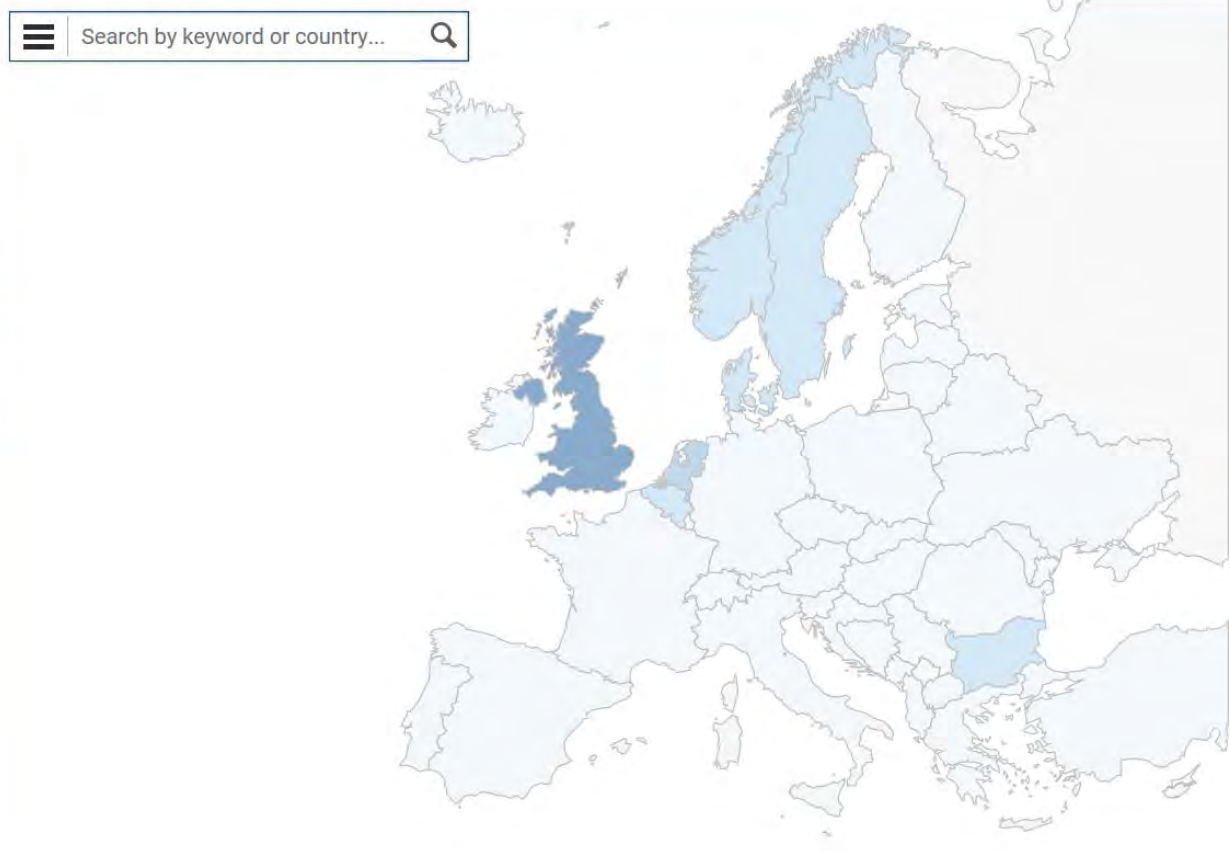

1. England: batched (Ofsted) inspections of Multi-Academy Trusts and monitoring of Regional Schools Commissioners
2. The Netherlands: inspections of networks for inclusive education
3. Northern-Ireland: area-based inspections (West Belfast)
4. Bulgaria: thematic inspections of a school peer review network (Sofia)

Dimensions

This interactive map presents examples of inspections of educational networks, such as networks of schools (under a school board) or networks for inclusive education. You can search for examples by country, or by the following three dimensions:

- ✓ Methodology 2
- ✓ Valuing and judgement 7
- ✓ User involvement 7

The key questions:

How effective is it to hold networks to account?

Does accountability of school networks benefit student learning?
