

# Biomedical resources at UK Data Service and Data Management Planning

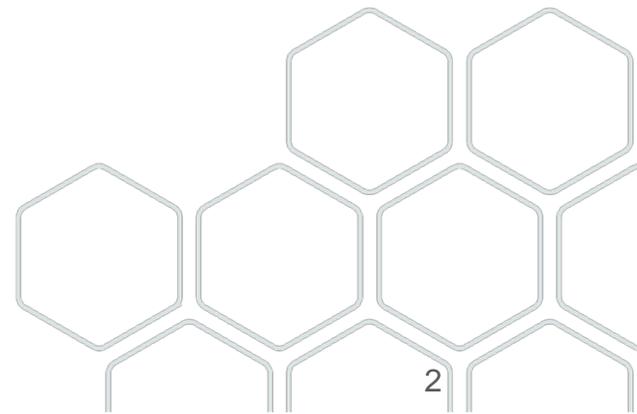

Soc-B Workshop

Cristina Magder & Hina Zahid

11 January 2022

# Can you hear us?

# Housekeeping

- Check your speaker/headset is plugged in / volume is on.
- Click on audio to change to listening via phone
- Questions can be submitted via the chat box anytime
- Please be on mute throughout the presentations

# Overview

## Part 1: Biomedical resources at UK Data Service and Data Management Planning

- Data sharing and its' benefits
- Overview of UK Data Service and UK Data Archive
- Examples of Biomedical data available at UK Data Service
- Overview of Data Management Planning (DMP) and its' importance
- Depositing with UKDS

## Part 2: Ethical and legal considerations for data sharing

# Data lifespan and data sharing

- data have a longer lifespan than the (research) project that creates them
- data can be (re) used for various purposes when well managed, preserved and shared
- who is benefiting from data sharing? researchers, public, funding bodies, scholarly community and research participants

# Exercise: Benefits of Data Sharing

How does data sharing benefit each group?

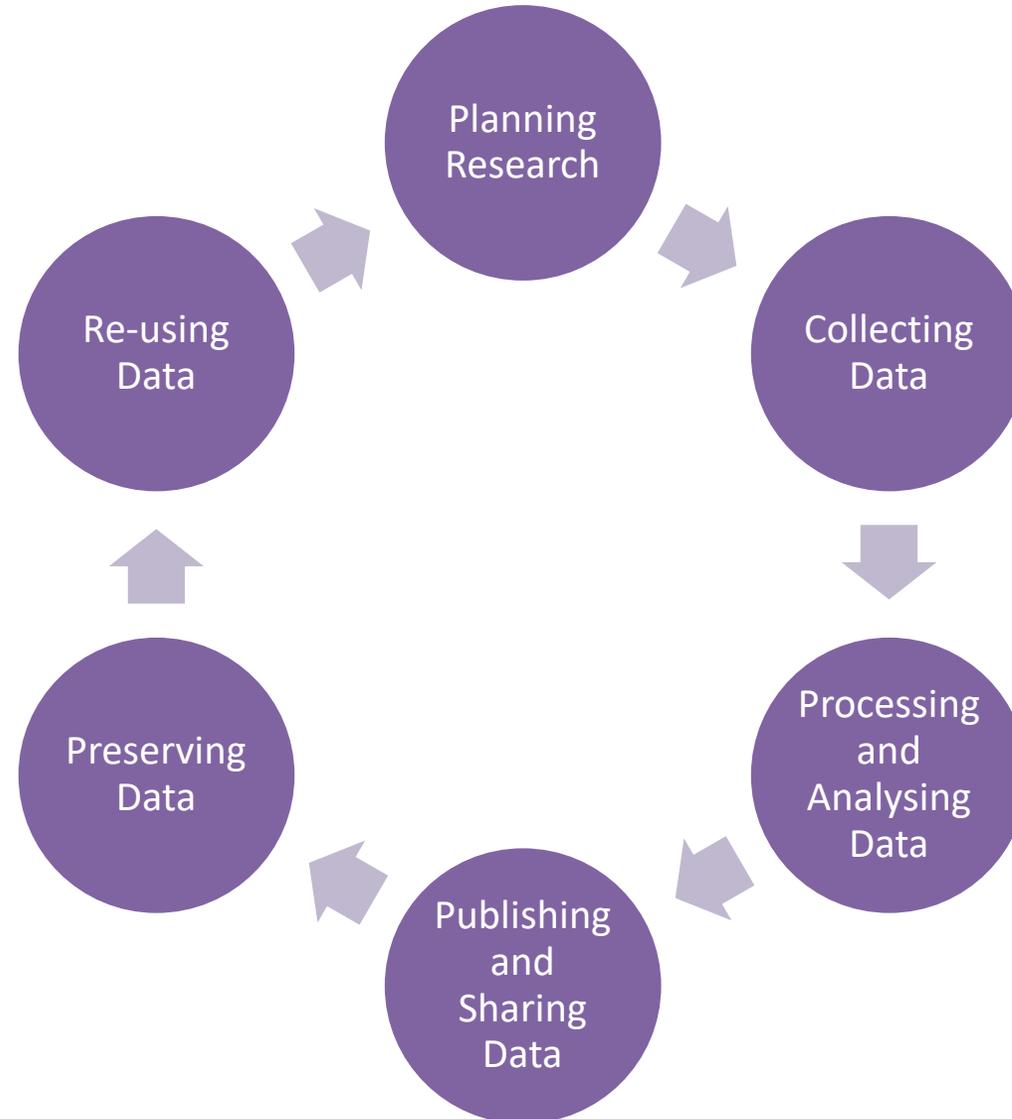

- **Researchers/Data Creators**
- **Funding Bodies**
- **Public**
- **Research Participants**

Please include ideas (with examples if possible) on the Padlet available at <https://padlet.com/dcmagd/88h7esaysnjpev90>

# Benefits of data sharing

Researchers	Funding Bodies	Public	Research Participants
increases visibility of scholarly work and increase citations (DOI)	make optimal use of publicly funded research	advance science to the benefit of society	allow maximum use of their contributed data/information
archiving provides long-term safe storage for data	avoid duplication of data collection	adoption of emerging norms – ‘open access’ publishing	minimise data collection on the hard-to-reach (e.g. ill, elites)
assists in implementing publishers’ data retention policies and enables collaborations	maximise return for investment	compliance with laws and regulations (transparency, openness, accountability)	enable participants’ experiences to be understood as widely as ethically possible

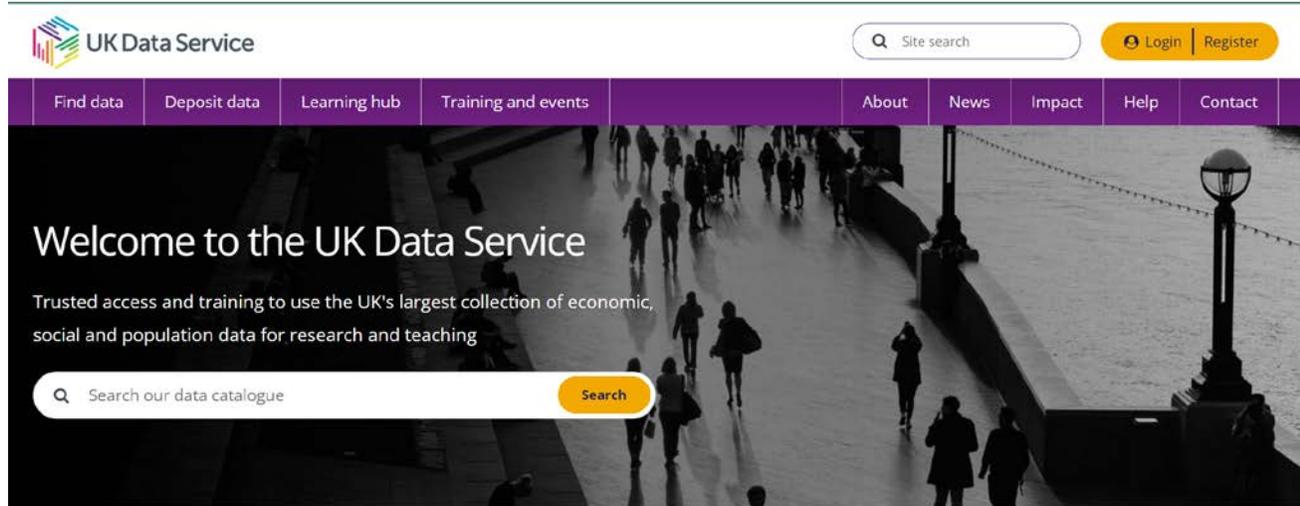

# Research Data Lifecycle

# UK Data Service

- UK's largest collection of UK and international social, economic and population data
- funded by the Economic and Social Research Council (ESRC)
- provide users with access, support, guidance and training to facilitate high quality social and economic research and education
- support the development of best practices for data preservation and sharing standards

## Welcome to the UK Data Service

Trusted access and training to use the UK's largest collection of economic, social and population data for research and teaching

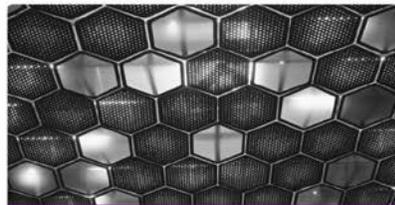

Search our data catalogue Search

## Key services

### [Browse data by theme or type](#)

Ageing, COVID-19, crime, economics education, environment & energy, ethnicity, food, health housing, information & communication, labour, politics, poverty.

### [Use secondary data in your research](#)

Free introductory training modules on-demand: Learn how to explore crime surveys with R or use longitudinal, survey and aggregate data.

### [Enter our sixth form and college competition](#)

Engage with data-driven research and design a campaign to change perceptions of immigration and the economy. Enter now!

- [UK Data Service Data Catalogue](#)
- [UK Data Service Training Events](#)
- [UK Data Service Research Data Management](#)

# UK Data Archive

- the lead partner of the [UK Data Service](#)
- centre of excellence in acquiring, curating and providing access to the largest collection of social science and population data for over 50 years
- provide a Trusted Digital Repository
- [sharing best practice](#), we help to lead international best practice in data management
- based at the [University of Essex](#)

# UKDS User Community

- Academic researchers and students
- Government analysts
- Charities and foundations
- Business consultants & data analysts
- Independent research centres & think tanks

# Some stats on UKDS

- **8,500** datasets in the collection
- **250** new datasets and new editions added each year
- **50,000+** registered users
- **200,000+** downloads worldwide per year
- **50+** applications for restricted data per month
- **4000+** user support queries per year

# UKDS: Sources of Data

- National statistical authorities
- UK government departments
- Intergovernmental organisations
- Research institutes
- Individual researchers

# UKDS: Data Portfolio

## UK Surveys

Large-scale government funded surveys

## Longitudinal

Major UK surveys following individuals over time

## International

Multi-nation aggregate databanks and survey data

## Census

Census data 1971 – 2011

## Business

Microdata and administrative data

## Qualitative

Range of multimedia qualitative data sources

# Licensing and access framework at UKDS

## Open

- No real disclosure risk. Under open licences; almost no restrictions on reuse

## Safeguarded

- Zero to low real disclosure risk. Requires authentication and authorisation e.g. registered user and End User Licence Agreement

## Controlled

- Real disclosure risk. Requires project approval, user vetting and training; access via a safe setting; output checking

# 5 Safes Framework

A set of principles the UK Data Service developed with the ONS and HMRC in 2017 which enable data services to provide safe research access to data

- **Safe data:** data is treated to protect any confidentiality concerns
- **Safe projects:** research projects are approved by data owners for the public good
- **Safe people:** researchers are trained and authorised to use data safely
- **Safe settings:** a SecureLab environment prevents unauthorised use
- **Safe outputs:** screened and approved outputs that are non-disclosive

# FAIR Principles

Findable

Accessible

Interoperable

Re-usable

Force 11 FAIR Principles

# Live Demo using the UK Data Service Data Catalogue

# UK Data Service Data Catalogue

# Biomedical data: UK Surveys – HSE

## Health Survey for England (HSE)

- designed to monitor trends in the nation's health

The aims of the HSE series are:

- to provide annual data about the nation's health
- to estimate the prevalence of certain risk factors associated with these conditions
- to examine differences between population subgroups in their likelihood of having specific conditions or risk factors;
- to assess the frequency with which particular combinations of risk factors are found, and which groups these combinations most commonly occur;
- to monitor progress towards selected health targets
- since 1995, to measure the height of children at different ages, replacing the National Study of Health and Growth;
- since 1995, monitor the prevalence of overweight and obesity in children

# Biomedical data: UK Surveys – HSE

## Core topics

- General health and longstanding illness
- Smoking and average weekly alcohol consumption
- Socio-economic information: sex, age, income, education, employment etc
- Prescribed medications (nurse)

## Measurements

- Height and weight
- Blood pressure (nurse)
- Waist and hip circumference (nurse)
- Blood sample for cholesterol, glycated haemoglobin (nurse)
- Saliva sample (nurse)

# Biomedical data: UK Surveys – HSE

## Health Survey for England

[Abstract](#)[FAQ's](#)[Resources](#)[Access data](#)

### Access data

GN 33261

Health Survey for England, 1991-

GN 33543

Health Survey for England, 1994- : Special Licence Access

Click on a series name or an arrow to see the datasets.

[Add to account](#)

# HSE Pgp3 and HSV2 Serum Antibodies

## Aim

- investigate trends in exposure to chlamydia among adults in England, and to identify factors associated with having antibodies to these infections

## Main Topics

- national prevalence of antibodies to Chlamydia trachomatis and Herpes Simplex Virus (Type 2)
- sexual behaviour
- demographics

# Biomedical data: UK Surveys – NDNS

## National Diet and Nutrition Survey

- designed to assess the diet, nutrient intake and nutritional status of the general population aged 1.5 years and over living in private households in the UK
- core topics include food shopping, preparation and eating habits, smoking and drinking, physical activity, general health

## Measurements

- height and weight
- spot urine sample
- blood pressure measurements
- blood sample

# Biomedical data: Long Data – UKHLS

Understanding Society study, or the United Kingdom Household Longitudinal Study (UKHLS)

- began in 2009
- builds on the long running British Household Panel Survey (BHPS) established in 1991

Tracks change at individual and household level by examining:

- what people are experiencing (circumstances and key events in their lives as they happen)
- attitudes, identity and subjective well-being (expressions)
- how individuals and households respond to policies and key events (behaviours)
- changes in societal conditions (outcomes)

# Biomedical data: Long Data – UKHLS

Measure	Applications
Height and weight, Waist circumference, Percent body-fat	BMI and assessment of excess body fat: obesity and risk factor for range of major chronic conditions and social outcomes
Respiratory function (Spirometry) (FVC,FEV <sub>1</sub> , PF, FEV <sub>1</sub> /FVC)	To detect both obstructive and restrictive respiratory diseases including COPD.
Diastolic and systolic blood pressure, resting pulse rate	Risk factor for stroke and heart conditions Risk cardio-vascular disease
Grip strength	Indicator muscle strength. Functional limitations and disability in older ages.
Blood samples (non-fasting), 19.8ml)	For the extraction of analytes and DNA
Short questionnaire on health on day of measurement, medications etc	Factors that may need to be considered in analysing physical measures and bloods

# Biomedical data: Long Data – CLS Cohorts

The Centre for Longitudinal Studies (CLS) is an Economic and Social Research Council resource centre based at University College London

CLS is responsible for running four of Britain's internationally-renowned longitudinal studies:

- [1958 National Child Development Study](#) (NCDS)
- [1970 British Cohort Study](#) (BCS70)
- [Millennium Cohort Study](#) (MCS)
- [Next Steps](#) (previously the Longitudinal Study of Young People in England (LSYPE1))

# Biomedical data: Long Data – MCS

The Millennium Cohort Study is providing information about babies born at the beginning of the 21st century, their progress through life, and the families who are bringing them up, for the four countries of the United Kingdom

## Measurements

- physical measurements since the age of 3 (height, weight, waist measurement and body fat)
- at ages 7 and 14 physical activity and sedentary behaviour monitored via activity monitors
- at age 14 cohort members and parents provided saliva samples for DNA extraction and subsequent genotyping - the first time a triad of DNA samples has been collected from 2 biological parents and their child in a large scale nationally representative study

# Biomedical data: Long Data – MCS

# Exercise: To share or not to share

Consider your research team has conducted a detailed survey on heart health conditions also gathering DNA, saliva and blood samples

Can you share the data? What are some challenges and opportunities?

Share the opportunities and challenges identified in sharing these data on the Padlet available at <https://padlet.com/dcmagd/awni80k6de9uInI3>

# Challenges

- Personal, confidential or sensitive information
- Linkage of data in multi-disciplinary projects
  - social with biomarkers or geo-located data
  - difficult to conceal identity of participants / fieldwork locations
- Lack of trust in others mis-using data
- Efforts and funding compete with 'the science'

# Opportunities

- Not burden over-researched, vulnerable groups
- Make best use of hard-to-obtain data, e.g. elites, socially excluded, over-researched
- Extend voices of participants
- Provide greater research transparency

# Data Management Planning

A [data management and sharing plan](#) helps researchers consider: when research is being designed and planned, how data will be managed during the research process and shared afterwards with the wider research community

Benefits:

- think what to do with research data, how collect, how look after
- keep track of research data (e.g. staff leaving)
- identify support, resources, services needed
- plan storage, short & long-term
- plan security, ethical aspects
- be prepared for data requests (Fol, funder)

# ESRC Data Management Plan (DMP)

Assessment of existing data

Information on new data

Quality assurance of data

Backup and security of data

Expected difficulties in data sharing

Copyright / Intellectual Property Right

Responsibilities

Preparation of data for sharing and archiving

[ESRC DMP guidance](#)

# Key planning considerations

- know your legal, ethical and other obligations towards research participants, colleagues, research funders and institutions
- know your institution's policies and services: storage and backup strategy, research integrity framework, IPR policy, institutional data repository
- assign roles and responsibilities to relevant parties
- incorporate data management into research cycle
- implement and review management of data during project meetings and review

# DMP tools and templates

- Funder template for DMP
  - [ESRC DMP requirements in data policy](#) and [DMP guidance](#)
  - [MRC DMP guidance and template](#)
  - [AHRC DMP requirements](#)
  - [NERC DMP guidance and template](#)
- DCC's [DMPonline](#) tool

# Benefits of depositing data with the UKDS

- no costs associated with depositing
- an online platform for creating, uploading, and managing deposits
- a three-tier licensing framework facilitating a robust access policy
- the Five Safes framework enabling controlled access to sensitive or confidential data
- data management guidance and support ensuring legal sharing and re-use
- persistent identifiers (DOIs) supporting resource discovery and citation
- promotion of deposits via newsletters and long-standing connections with partner Archives and organisations (e.g. CESSDA)
- de-identified study level metrics for funding proposals or extensions

# UKDS appraisal process

We have an appraisal process

Assessment according to our [Collections Development Selection and Appraisal Criteria](#), informed by our [Collections Development Policy](#)

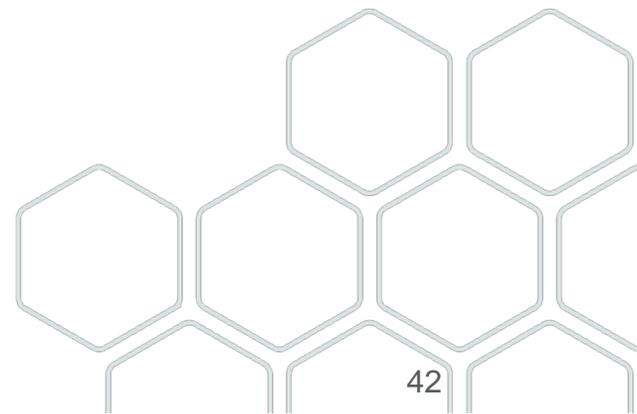

Our decision will be one of the following:

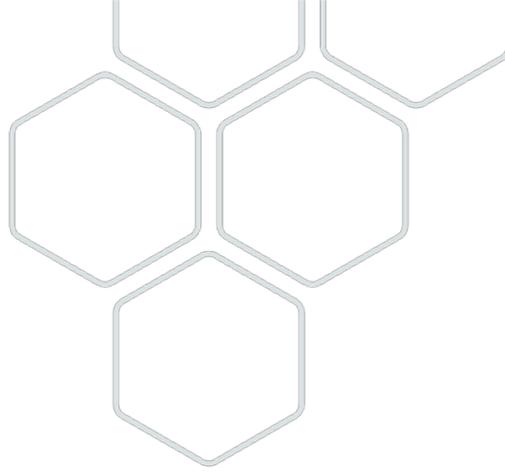

- Accept the data in the curated repository,
- Accept the data in the self-deposit repository [ReShare](#).
- Advise you to use an institutional repository or alternative place of deposit.

# How to deposit via UKDS

- If you wish to deposit data with the UK Data Service, you first need to [register](#) and create an account.
- If you are depositing data from large-scale government departments or larger research organisations you can deposit data in our curated repository.
- If you are a researcher you can deposit your data via the UK Data Service self-deposit repository [ReShare](#).
- ReShare is also suitable for the direct deposit of datasets described in a data paper or data descriptor in a peer-reviewed journal, such as Scientific Data and the Research Data Journal.

Any questions?

# Thank you.
