

HPSC0039 Science, Warfare & Peace

Course Syllabus

2020-21 session | Convenor: Professor Brian Balmer | b.balmer@ucl.ac.uk

Course Information

This module explores the relationships between science, war and the prevention of war. It will place military and security technologies within social, political, and historical contexts. There is particular emphasis on the twentieth and twenty-first centuries and on weapons usually designated as 'unconventional' or 'weapons of mass destruction'. In addition to thinking about how science, technology and warfare have shaped each other, this module also considers the changing role of the scientist in relation to the state, and considers broader themes such as the arms control, disarmament, ethics, and popular culture in relation to war.

Basic course information

Course website:	On Moodle
Moodle Web site:	https://moodle.ucl.ac.uk/course/view.php?id=7444
Assessment:	This term's course will be assessed on the basis of <i>one</i> written assignments: review (60%) and an exam (40%).
Timetable:	www.ucl.ac.uk/timetable
Prerequisites:	no pre-requisites, course designed primarily for year 3 undergraduate students
Required texts:	See reading list
Course tutor:	Professor Brian Balmer
Contact:	b.balmer@ucl.ac.uk
Web:	https://www.ucl.ac.uk/sts/people/professor-brian-balmer
Office location:	22 Gordon Square, Room 2.1
Office hours:	See Moodle or Staff Website (above)

Schedule

UCL Week	Topic	Study Dates
21	Science: Technology: War: Security	11-12 Jan
22	Are scientists responsible for the weapons they create?	13-19 Jan
23	'Duck and Cover': Atomic Weapons, Armament and Disarmament	20-26 Jan
24	Can weapons successfully be prohibited? Chemical and Biological Warfare	27 Jan-2 Feb
25	What is a Weapon? How STS studies military and security technologies	3 -9 Feb
26	Reading Week	15 Feb
27	Tacit Knowledge: Can Weapons be Un-Invented?	10-12 Feb; 22-23 Feb
28	Ignorance in Action: Non-Knowledge, Secrecy and Absence	4 Mar
29	Automatic War	11 Mar
30	War Every Day: The Securitisation of Everyday Life	18 Mar
31	After War: Who counts the dead?	25 Mar

Assessments

Summary

	Description	Deadline	Word limit	Feedback by
1	Essay (60%)	31 March 17.00 hrs	2500-3000	https://www.ucl.ac.uk/academic-manual/chapters/chapter-4-assessment-framework-taught-programmes/section-8-assessment-feedback
2	Review (40%)	10 May 17.00 hrs	1000	

There will be a short (200 word) formative assessment (i.e. no mark given) due over reading week to help you with the long essay assignment.

Full details and instructions are at the end of this document.

Assignments

This term's module will be assessed on the basis of *two* written assignments (see above and end of this document). For the long essay, you are encouraged to develop your own essay question but a list of topics and example essay questions is included with this reading list. Students may discuss any aspects of their essays with me during my office hours. Your long essay is expected to show evidence of wide reading (including relevant material from beyond the reading list) and critical thought in your essays.

Full details and instructions are at the end of this document

Essays must be submitted via Moodle. In order to be deemed 'complete' on this module students must attempt both assignments.

See the www.ucl.ac.uk/sts/handbook for late penalties and over-length penalties.

Criteria for assessment

The departmental marking guidelines for individual items of assessment can be found in the STS Student Handbook.

Aims & objectives

This course investigates the relationship between science, technology and war, primarily using intellectual tools from history, philosophy and sociology of science. The course explores military science and technologies in their social, political and historical context, and focuses mainly on the twentieth and twenty-first centuries.

By the end of this course you should:

- Be able to apply critical thinking to understanding issues around science, technology, war and security. In particular, perspectives from history and sociology of science.
- Have developed knowledge of the history and governance of modern military technologies, particularly so-called weapons of mass destruction (chemical, biological, nuclear).
- Have been able to write an extended essay on topics relevant to the course

Course expectations

See UCL Timetable for time and locations of sessions.

There will be a reading week, with no lectures or seminars, see course schedule.

Please note that electronic recording of lectures is not permitted without permission from the course tutor.

Reading for this course: The notes that you take in lectures will not be detailed enough to understand a topic or to write an assignment on that topic. It is therefore essential that you make use of the reading list. You are *not* expected to read all of the material. You will be expected to read at least one piece each week in preparation for class and you will certainly need to read widely for your essays and may include material from beyond the reading list. However, read critically: you don't have to read everything, you can agree or disagree with everything you read – but you should be able to say why you hold your views and where possible use other things you have read to support your reasons.

Where to find the reading material: There is no one text which covers this course. Most of the reading material is electronically available through DMS Watson library or through e-books and on-line electronic journals accessible through the library web-site.

A small number of more difficult to find readings [marked on the reading list] have been digitized by the Library and can be obtained by clicking on the link to the Online Reading List on the Moodle page – it is on the right hand side under Library Resources.

There is also useful material kept in **Senate House Library** which you can obtain a library card with your UCL Identity Card.

You are also encouraged to use the internet for research. However, make sure you reference the full web address, the site title and date visited. Be critical of what you read and be careful of purely descriptive sites such as Wikipedia – I will be looking for evidence of some hard thinking and argument in your essays, not simple regurgitation of basic information. Also note that plagiarism, particularly involving internet sources, will be treated as a severe exam irregularity.

Important policy information

Details of college and departmental policies relating to modules and assessments can be found in the STS Student Handbook www.ucl.ac.uk/sts/handbook

All students taking modules in the STS department are expected to familiarise themselves with these policies.

1. Science: Technology: War: Security

*"I know not with what weapons World War III will be fought,
but World War IV will be fought with sticks and stones."*

Albert Einstein

Essential Reading:

Kaldor, M (2013) 'In defence of new wars', *Stability: International Journal of Security and Development* 2(1) [Open Access Online]

Additional Reading

Roland, A (2003) 'Science, technology, and war', in Mary Jo Nye (ed.), *The Cambridge History of Science. Volume 5: The Modern Physical and Mathematical Sciences*, Cambridge: Cambridge University Press, pp.561-578.

(Very useful, if compressed, summary of relationships between science, technology and war in C20th century) [UCL library E-book]

David Edgerton, 'Significance', 'War', and 'Killing' in *The Shock of the Old: Technology and Global History since 1900*, London: Profile Books, 2006. [War chapter in digital Moodle readings]

Kaldor, M. (2007). *New and Old Wars*. Stanford, Calif.: Stanford University Press.
(Post-cold war) [UCL Library E-book]

2. Are scientists responsible for the weapons they create?

"Now I am become death, the destroyer of worlds"

J. Robert Oppenheimer (1965, recalling a phrase from the Hindu scriptures
at the first test of the atomic bomb, 1945)

*"When you see something that is technically sweet, you go ahead and do it and you argue about
what to do about it only after you have had your technical success.
That is the way it was with the atomic bomb."*

J. Robert Oppenheimer (1954)

Essential Reading:

Thorpe, C. (2004). Violence and the Scientific Vocation. *Theory, Culture & Society*, 21(3), pp.59-84.

Additional Reading

Scientists and the Use of Weapons

Thorpe, C (2007), *Oppenheimer: The Tragic Intellect*, (Chicago: University of Chicago Press) chapters 6 and 7. (UCL library E-book)

(Analyses physicist J. Robert Oppenheimer's views on the moral responsibility of the scientist)

Henry T. Nash (1980) The bureaucratization of homicide, *Bulletin of the Atomic Scientists*, 36:4,22-27 [Senate House Library e-journal]

Slovic, P. (2007). "If I look at the mass I will never act": Psychic numbing and genocide. *Judgment and Decision Making*, 2, 79-95. Available at www.decisionresearch.org

Asaro, Peter M. (2013). "The Labor of Surveillance and Bureaucratized Killing: New Subjectivities of Military Drone Operators." *Social Semiotics* 23 (2): 196–224.

4. Can weapons successfully be prohibited? Chemical and Biological Warfare

“These important decisions, which have been announced today, have been taken as an initiative toward peace. Mankind already carries in its own hands too many of the seeds of its own destruction. By the examples we set today, we hope to contribute to an atmosphere of peace and understanding between nations and among men.”

US President Richard Nixon, announcing the termination of its offensive biological warfare programme and re-affirming its no-first-use policy on chemical weapons (25 Nov 1969)

Essential Reading:

The readings have been chosen to address three possible sources of biological weapons threat: nation states; so-called ‘dual use research of concern’, and bioterrorism.

Lentzos, F. (2013). *Hard to Prove: Compliance with the Biological Weapons Convention*. King's College London. (available online https://kclpure.kcl.ac.uk/portal/files/9599980/Policy_Brief.Aug_2013.pdf)

Assessment

Long Essay: Assignment one

Your essay should be 2500-3000 words long on a topic related to the course. See below for the list of topics and themes we covered each week (excluding week 1). You can choose a whole topic, one or more particular aspects of a topic, or even answer a question that makes links across topics if you want. You can choose or modify the example question, but credit will be given to students who select their own question.

Essay Part 1: Preparation

Over reading week, you should do some preliminary reading and formulate a working essay question. This need be no more than the topic essential reading and perhaps one or two additional readings (but it's up to you).

Here is some essential advice on formulating a good essay question:

<https://writingcenter.gmu.edu/guides/how-to-write-a-research-question>

Write down the question you intend to answer and briefly give the main reasons for your answers to the evaluation questions (Step 5 of the steps to developing a research question in the link above):

- *Is your research question clear?* With so much research available on any given topic, research questions must be as clear as possible in order to be effective in helping the writer direct his or her research.
- *Is your research question focused?* Research questions must be specific enough to be well covered in the space available.
- *Is your research question complex?* Research questions should not be answerable with a simple “yes” or “no” or by easily-found facts. They should, instead, require both research and analysis on the part of the writer. They often begin with “How” or “Why.”

If you are having difficulty formulating a question read:

Elaine Payne and Lesley Whittaker, *Developing Essential Study Skills* (Chapter 15, especially the part on understanding what a question is asking you to do)

All essays ask a question, and in providing an answer you need to make an argument. Add a short sentence or two starting "I intend to argue that..." (what are you trying to persuade the reader in relation to the topic). This is early planning, your wording of the question and the argument might change as you read more.

Your maximum word count for this preliminary proposal should be 200 words. This will not be assessed - it is an opportunity to get some brief, early feedback on where you are headed with the assessment. Again, you can modify or even change your topic and argument based on feedback. Submit your evaluation and argument on Moodle

Essay Part 2: Write your 2500-3000 word essay.

TOPIC 1.

Scientist's responsibility in war.

Military experiments involving humans (what counts as an experiment?)

Example question: Are scientists responsible for the weapons they create?

TOPIC 2.

Role of scientists in atomic warfare

Disarmament – CND, Pugwash etc

Bureaucratisation of killing

Example question: Were Cold War scientists naïve to become involved in nuclear disarmament initiatives?

TOPIC 3.

Chemical and Biological Weapons

Arms control/disarmament

Example question: Are there better ways to think about the so-called dual-use dilemma than in terms of 'dual-use'?

TOPIC 4.

What is a weapon? Where do new military technologies come from?

Technological Determinism vs Social Shaping,

Actor-Network theory/Assemblage theory

Example question: How, if at all, are military technologies socially shaped? What, if any, are the limitations of the 'social shaping' approach?

TOPIC 5.

Tacit knowledge and military technology

Example question: Does 'tacit knowledge' present a serious barrier to the proliferation of Weapons of Mass Destruction?

TOPIC 6.

Non-knowledge and secrecy/absence/ignorance in military and security issues

Counting the dead, and the politics of counting the dead

Example question: Is secret military science simply open science done behind closed doors?

TOPIC 7.

Automatic war

Drones

Cybersecurity

Simulation and war (see also war and popular culture, topic 8)

Example questions: Critically discuss Sullin's contention that 'If you are a politician in a liberal democracy, then the technology of unmanned weapons is the answer to your dreams'.

Discuss whether it is possible to have “meaningful human control” over autonomous weapons.

TOPIC 8.

Securitisation of everyday life

Surveillance

Non-lethal weapons

Planning for the next emergency

War, science and popular culture (see also simulation, topic 8)

Example question: How do security technologies ‘spread’ into everyday life? Do these new security technologies make daily life more or less secure?

TOPIC 9.

Counting casualties

You might want to make links to impersonalisation of war (Topic 2)

Example question: “Mathematics is and are inseparable from politics” (Nelson 2015, p4). Critically discuss this claim in relation to counting casualties during and after war.

Short Review Essay: Assignment Two

By this stage of the module you should be able to read, understand and start to provide your own evaluation of research articles that draw on STS approaches when dealing with war and security.

First read the chapter:

Vogel, Kathleen *et al* (2017), “Knowledge and Security”, in *The Handbook of Science and Technology Studies 4th*, edited by Ulrike Felt *et al*. Cambridge MA: MIT Press, 2017, Section V, 973-100.

[Available online through UCL Library and direct through the module Moodle site under Assessment]

This is an up to date review of the ‘state of the art’ of research in STS and security. Perhaps wait until at least week 2 (after the class) of the course to begin reading it.

Select **one** research article or chapter (or whole book if you’re feeling ambitious) from the **chapter bibliography** at the end of the Vogel *et al* chapter on a topic that you are not intending to choose for your long essay. Avoid any short news items or very descriptive background pieces as there will be less to agree or disagree with. You must make this a different topic to your essay one topic (you are permitted some overlap, but it should mainly link to a different topic).

Write a 1000 (+/-10%) word critical review of the article/chapter/book.

- The review should have a title of your choosing, and you should also clearly state which piece you are reviewing. [don’t add this to the word count]
- *You should also read at least 3-4 pieces from the most relevant topic on the reading list or material cited in the Vogel chapter as contextual material. You can also search out your own contextual material.*
- The review should **describe** and **explain** the main argument(s) presented in the article/chapter/book. Your review should also leave space for **critical discussion** of the material presented in the piece (e.g. strengths, weaknesses, comparison with other literature on the topic, or with other approaches on the course, does it really

achieve what it claims to have done?). Hint: It helps here to have one main message that runs through your review.

- Once you have cited your main review article/chapter/book for the first time, after that you can simply refer to the page number(s) in brackets instead of citing each time. Other citations to contextual reading should be fully cited (see standard referencing conventions such as Harvard or Chicago for in text and in bibliography formats).
