

## Math 152, Spring 2011, Review Problems for Midterm Exam 2

Your second midterm examination is likely to contain some problems that do not resemble these review problems.

(1) Evaluate the following improper integrals:

$$\int_5^{\infty} \frac{dx}{(x-3)(x-4)} \quad \int_0^1 \ln x \, dx \quad \int_0^{\infty} \frac{x^3 \, dx}{e^x} \quad \int_{-\infty}^{\infty} \frac{dx}{9+x^2}$$

(2) Show that one of these improper integrals converges, and that one them diverges:

$$\int_7^{\infty} \frac{dx}{x - |\cos(x)|} \quad \int_5^{\infty} \frac{dx}{e^{x^2}}$$

(3) Find the length of the cardioid  $r = 1 - \cos \theta$ ,  $0 \leq \theta \leq 2\pi$ .

(4) Find the area inside the cardioid  $r = 1 - \cos \theta$ ,  $0 \leq \theta \leq 2\pi$ .

(5) Find the length of the curve  $y = (x+2)^{3/2}$ ,  $0 \leq x \leq 1$ .

(6) Use calculus to find the surface area of a sphere of radius  $R$ .

(7) Find the center and radius of the circle  $r = \sin \theta$ ,  $0 \leq \theta \leq \pi$ .

(8) Find a parametrization  $x = f(t)$ ,  $y = g(t)$  of the ellipse  $9x^2 + 16y^2 = 36$ .

(9) Find the length of the curve given parametrically by  $x = t^2$ ,  $y = t^3$ ,  $1 \leq t \leq 2$ .

(10) Find the Taylor polynomial  $T_3(x)$  of the function  $f(x) = \frac{1}{x}$  with center at  $a = 1$ . Find an estimate for  $|f(3/2) - T_3(3/2)|$  using the Error Bound.

(11) Evaluate the following limits:

$$\lim_{n \rightarrow \infty} \frac{\sin n}{n} \quad \lim_{n \rightarrow \infty} (3n)^{1/n} \quad \lim_{n \rightarrow \infty} \left(1 - \frac{5}{n}\right)^n$$
$$\lim_{n \rightarrow \infty} n(\sin(1/n)) \quad \lim_{n \rightarrow \infty} n^2(1 - \cos(1/n))$$

(12) Write the repeating decimal  $5.273273273 \dots$  in the form  $p/q$ , where  $p$  and  $q$  are natural numbers.

(13) Evaluate each of the following sums. Your answers must be simple numbers.

$$\sum_{n=3}^{\infty} \frac{2^n}{3^{n+1}} \quad \sum_{n=4}^{\infty} \frac{1}{n(n-1)}$$

(14) For each series below, determine whether it converges or diverges. Explain your reasons.

$$\begin{aligned} & \sum_{n=5}^{\infty} \frac{(-1)^{n-1}}{\sqrt{n}} & \sum_{n=5}^{\infty} \frac{1}{n(\ln n)} & \sum_{n=5}^{\infty} \frac{1}{n(\ln n)^{3/2}} \\ & \sum_{n=4}^{\infty} \left(1 - \frac{5}{n}\right)^n & \sum_{n=4}^{\infty} \sin(1/n) & \sum_{n=4}^{\infty} (1 - \cos(1/n)) \\ & \sum_{n=2}^{\infty} \frac{2^n}{3^n + 1} & \sum_{n=2}^{\infty} \frac{n^2}{n^4 - n^3 - 4} \end{aligned}$$

(15) Estimate the error involved in taking the sum of the first 10 terms of each of the following series as an approximation to the full sum.

$$\sum_{n=1}^{\infty} \frac{1}{n^2} \quad \sum_{n=1}^{\infty} \frac{(-1)^n}{n^2}$$

(16) Define *absolute convergence*, and give an example of a series that converges conditionally, but does not converge absolutely.

(17) An infinite sequence is defined by  $a_1 = 1$  and  $a_{n+1} = \sqrt{12 + a_n}$  for  $n = 1, 2, 3, \dots$ . Assume that the sequence converges. Find  $\lim_{n \rightarrow \infty} a_n$ .
